Applicant's amendment to the specification to replace "429" with "427" is acknowledged. However, the objection to the specification as identifying an amino acid as being hydrophilic when it is hydrophobic is maintained because residue 427 of SEQ ID NO:1 is a proline, which is a hydrophobic amino acid.

The rejection of claim 1 under 35 U.S.C. 102(a) as being anticipated by Hanson is maintained for the reasons of record and the reasons set forth below. The Declarations of Dunn and Gruenwald have been fully considered and present evidence that the Hanson reference was publicly available as early as February 2003. Since February 2003 is prior to the filing date of PCT/US03/36125, which was filed on 11/14/03, it appears that the prior-filed provisional application 60/426,788, filed on 11/14/02, must be relied on to antedate the Hanson reference. The examiner has made an earnest effort to locate descriptive support for the limitations of claim 1 in the provisional application, however, no such support is apparent to the examiner. As such, even in view of the Declarations of Dunn and Gruenwald, the reference of Hanson remains available as prior art under 35 U.S.C. 102(a).
